

Patel Uday

uday.patel@vaxainfotech.com

[Ahmedabad, Gujarat]

Summary :

- Backend Developer with **3 years of experience** at **Vaxa Infotech**, specializing in **Python** as the core programming language and leveraging frameworks such as **Flask** and **React** to build secure, scalable, and high-performance web applications.
- Throughout my career, I have collaborated with frontend developers working in **JavaScript**, **React** to deliver seamless full-stack solutions tailored to business requirements.
- My expertise includes designing and optimizing **SQL databases**, developing and integrating **RESTful APIs**, and implementing best practices for performance tuning, debugging, and deployment.
- I have contributed to projects ranging from enterprise applications to web platforms, ensuring reliability, maintainability, and a smooth user experience. In addition, I am well-versed in agile methodologies, version control with Git.
- Passionate about problem-solving and continuous learning, I bring a balance of strong backend engineering skills, practical knowledge of frontend technologies, and a commitment to delivering high-quality software that aligns with organizational goals.

Technical Skills:

Operating System	Windows
Programming Languages:	Python (Core), JavaScript (ES6+)
Databases	MySQL

Frameworks & Libraries:	Flask, React
Web Technologies	HTML5, CSS3, jQuery, RESTful APIs, JSON, AJAX+
Other Skills	API Intexgration, Authentication & Authorization (JWT/OAuth), Database Optimization, Debugging & Performance Tuning
Version Control	Git

Project Experience: (Some of the Projects are mentioned below)

1) Project Name:- MedTrackr – Intelligent Healthcare Appointment & Patient Management System

Duration: 8 Months

Technology Used :-

- Python (Flask, FastAPI)
- React

Responsibilities :-

- Developed and deployed **secure, scalable RESTful APIs** using Flask REST Framework and FastAPI for managing patient data, appointments, and doctor schedules.
- Built a **responsive user dashboard** in React.js and an **admin portal** in Angular, improving usability for doctors and clinic administrators.
- Designed and optimized **PostgreSQL schemas** to handle patients, appointments, lab reports, and medical history with high data integrity.
- Created an **AI-driven scheduling assistant** in Python to detect appointment conflicts and automatically assign doctors, improving efficiency by reducing manual errors.
- Implemented **real-time notifications** for appointment reminders, prescriptions, and lab results using Firebase Cloud Messaging.
- Leveraged **Celery with Redis** to manage background tasks such as bulk data processing, automated email/SMS notifications, and report generation.

- Integrated **JWT-based authentication** and enforced **two-factor login**, aligning with **HIPAA-compliant security practices** to protect patient data.
- Contributed to **CI/CD pipeline integration (GitLab CI)** ensuring smooth deployments, automated testing, and high system availability.

2) Project Name:- Resume Parsing & Candidate Shortlisting System (Backend Developer)

Duration: 5 Months

Technology Used :-

- Python
- Flask
- SQL
- JavaScript (Admin Panel)

Responsibilities :-

- **Engineered an end-to-end recruitment automation platform** capable of processing and analyzing **large volumes of resumes** with high accuracy and reliability.
- Built a **resume parsing engine** using advanced Python NLP libraries to extract structured data (skills, work experience, education) from **unstructured documents** (PDF/DOCX).
- Designed and deployed a **dynamic, role-based admin panel** that allows HR managers to configure and manage hiring requirements such as job titles, skills, and minimum years of experience.
- Implemented **rule-based logic, keyword matching, and ranking algorithms** to automatically shortlist and prioritize candidate profiles against predefined job criteria.
- Developed **secure, scalable RESTful APIs** to connect backend processing with the HR admin interface, enabling **real-time updates and seamless integration**.
- Achieved a **significant reduction in manual resume screening time**, automating the entire shortlisting workflow and enabling HR teams to focus on **high-quality candidate engagement**.

3) Project Name:- Robotic Interview & Candidate Evaluation System

Duration: 6 Months

Technology Used :-

- Python
- Flask
- React
- SQL
- NLP

Responsibilities :-

- **Engineered an AI-driven interview automation system** to streamline candidate evaluation following the resume shortlisting stage.
- Built and deployed **RESTful APIs** to deliver dynamic interview questions to the React-based frontend, capturing candidate responses in **real time**.
- Designed a **multi-level scoring framework** incorporating exact answer matching, keyword-based evaluation, and semantic similarity checks for accurate performance assessment.
- Integrated the **Python Wikipedia library** and external data sources to validate candidate answers against authoritative references, ensuring credibility.
- Developed a **comprehensive results dashboard** for HR managers to review scores, track candidate progress, and analyze interview outcomes.
- Enhanced the recruitment workflow by **automating early-stage screenings**, reducing manual HR effort, and enabling **standardized, unbiased, and scalable evaluations**.

❖ Some ongoing R & D :-

4) Project Name: SmartHRBot – Conversational AI Assistant for HR Operations

Technology Used:

- Python
- Flask
- React.js
- mySql
- OpenAI GPT-4 API
- Rasa NLU

Responsibilities :-

- **Developed an AI-driven HR assistant chatbot** to automate responses to frequent employee queries such as leave balances, salary slips, policies, and holidays.
- Designed **backend services using Flask and Rasa** for intent detection, context management, and dialog flow orchestration.
- Integrated the **GPT-4 API** to handle complex, natural language queries beyond predefined intents, improving coverage and accuracy.
- Built a **real-time web interface** in React.js with socket-based communication for smooth, interactive chat experiences.
- Designed and implemented a **PostgreSQL database** to persist user sessions, queries, and HR documents, enabling context-aware responses.
- Conducted **internal testing and performance tuning** to ensure reliability, reduce HR workload, and deliver consistent, instant answers to employees.
- Preparing deployment across **Slack and internal company portals**, targeting wider adoption and streamlined HR support operations.
